

Research Data Management

Data Management is essential for responsible research.

Where are you in your research? What are the next steps in the research data lifecycle? How do you manage your data throughout the data lifecycle?

Make sure that your well-organized and documented data will meet funding agency requirements, has longevity, is discoverable and is reproducible. Many funders now require data management planning.

Learn what RDM is, how it applies to your research at every stage of the research data lifecycle and who to contact for assistance.
